1. **Introduction**
The purpose of this study is to investigate the effects of the proposed system on the performance of the system. The study is organized as follows: Section 2 describes the system architecture. Section 3 describes the experimental setup. Section 4 describes the results of the experiments. Section 5 discusses the conclusions of the study.

2. **System Architecture**
The system architecture is shown in Figure 1. The system consists of a client and a server. The client is responsible for sending requests to the server. The server is responsible for processing the requests and returning the results to the client.

3. **Experimental Setup**
The experiments were conducted on a system with the following specifications: 1. Processor: Intel Core i7-4790K 4.7GHz. 2. Memory: 16GB DDR4. 3. Storage: 1TB SSD. 4. Operating System: Windows 10. 5. Network: 10Gbps Ethernet.

4. **Results**
The results of the experiments are shown in Table 1. The table shows the performance of the system for different values of the parameter n . The performance is measured in terms of the number of requests processed per second (RPS).

5. **Conclusions**
The study concludes that the proposed system significantly improves the performance of the system compared to the baseline system. The improvement is most significant for large values of n .
